#### BEZL VAVILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- EVDED LEXT
- ILLEGIBLE TEXT
- SKEMED/SLANTED IMAGES
- COFOKED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GKAY SCALE DOCUMENTS

#### IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

RE: Seq. Search Request

Sorry about that. It is SEQ ID NO:2. Thanks.

Seq. Search Request

Fozia,

You recently submitted a seq. search request for SN 09/892949; however, you omitted the Seq. ID to be searched. Your request reads:

Pls. search SEQ ID NO: from amino acid residue 20-227; 544-732; 520-543 against commercial data bases, thanks.

Which Seq. ID do you wish to search?

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a cytokine receptor designated zcytor17. CC Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, cantirheumatic, antiarthritic and muscular activities. The zcytor17 cc antirheumatic, antiarthritic and muscular activities. The zcytor17 cc proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated cc immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain cc treatment of infections involving immunosuppression, including certain critical infections. They are also useful for inducting cytotoxicity and critical for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple cfor treatis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the

(I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NR10 splicing variants of hematopoietin receptor proteins genes, applicable in searching hematopoietic factors and cremedies for immunological and hematopoietic diseases -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes haematopoietic receptor NR10 splicing variants (I). (I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.7 protein from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NR10 splicing variants of hematopoietin receptor proteins genes, applicable in searching hematopoietic factors and cremedies for immunological and hematopoietic diseases -

(I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.6 protein from the present invention.

                                                                                                  The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial rescenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a PRO protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (GETH)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertrension, arterial restenosis, rheumatoid arthritis, anglina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polymucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention.

The invention relates to one hundred and twenty two nucleic acids
cencoding PRO polypeptides. The sequences of the 122 PRO polypucleotides
cencode human secreted proteins. The PRO nucleic acids, polypeptides,
cencode human secreted proteins. The PRO nucleic acids, polypeptides,
cencode human secreted proteins. The PRO nucleic acids, polypeptides,

                                                                                                                                               The present invention describes haematopoietic receptor NR10 splicing variants (I). (I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.5
                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO200277230-A1

                CC Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, antiarheumatic, antiarthritic and muscular activities. The zcytor17 CC proteins are useful for treating and diagnosing lymphoid, immune, CC inflammatory, spleenic, blood or bone disorders. Agonists or CC anti-zcytor17 antibodies are useful in stimulating cell-mediated CC immunity and for stimulating lymphocyte proliferation, such as in the CC treatment of infections involving immunosuppression, including certain CC viral infections. They are also useful for inducting cytotoxicity and CC for treating leukopenias. Antagonist of zcytor17 polypeptides are useful CC for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple CC sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, CC pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to CC chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the CC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Zcytor17; chromosome 5; 5q11; cytokine receptor; immunomodulatory; antiirinflammatory; antiiriral; antirheumatic; antiarthritic; cytostatic; muscular; lymphoid; immune; inflammatory; spleenic; blood; bone; infection; immunosuppression; cytotoxicity; leukopenia; Crohn's disease; autoimmune disease; rheumatoid arthritis; multiple sclerosis; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated polynucleotide useful for treating and spleenic, blood or bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a cytokine receptor designated zcytor17. Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 18; Page 195-197; 235pp; English.

                     The present sequence represents a human haemopoietin receptor protein (NR10), specifically designated NR10.1. NR10 occurs as a transmembrane protein and a soluble protein. NR10 is a haemopoietin receptor molecule which participates in immunoregulation and haematopoietic cell regulation in vivo, and is useful in searching for haematopoietic factors capable of binding to the receptor. NR10 can be used for the identification of substances for the treatment and prevention of immune and haematopoietic disorders including autoimmune diseases and allergies such as metal and pollen allergy.
                                                                                                                                                                                             Hematopoietin receptor protein NR10 for screening potential ligands treatment of immune and hematopoietic disorders such as autoimmune

Sequence

8

The present invention relates to human and murine haematopoietin receptory polypeptides HPR1 and HPR2. Sequences of the invention are useful for treating cell proliferation conditions e.g., pancytopaenia, leukopaenia, anaemia, thrombocytopaenia, neurodegenerative disorders and osteoporosis resulting from a lack of bone-forming cells. They are also useful for

haematopoietin receptor

CC treating cell proliferation conditions such as leukaemia and tumour CC metastasis, osteoporosis resulting from an excess of bone-resorbing CC cells. HPR sequences are also useful for treating medical conditions and CC diseases such as cell proliferation, metabolic and reproductive hormone CC related conditions. They are useful for treating various haematologic and CC oncologic disorders e.g., Epstein-Barr virus-positive nasopharyngeal CC carcinoma, myelogenous leukaemia, colon, stomach, prostate, renal cell, CC cervical and ovarian cancers, lung cancer (SCLC and NSCLC), including CC cancer-associated cachexia, fatigue, solid tumours (e.g., osteosarcoma, CC squamous cell carcinoma (e.g., adenocarcinoma (for example, breast cancer), carcinoma (e.g., adenocarcinoma (for example, breast cancer), CC squamous cell carcinoma), haemacologic disorders, anaemias (e.g., anaemia CC dysplastic syndromes (including refractory anaemia, refractory anaemia CC with ringed sideroblasts or with excess blasts), idiopathic thrombocyto-paenic purpura (ITP), sickle cell vacess blasts), idiopathic thrombosis/
CC myeloid metaplasia, osteoclast disorders that lead to bone loss such cancer in toth loss of the content of the process of the content of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Loc

NR10 occurs as a transmembrane protein and a soluble protein. NR10 is a haemopoietin receptor molecule which participates in immunoregulation and haemotopoietic cell regulation in vivo, and is useful in searching for haematopoietic factors capable of binding to the receptor. NR10 can be used for the

                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                              CC oncologic disorders e.g., Epstein-Barr virus positive nasopharyngeal
CC carcinoma, myelogenous leukaemia, colon, stomach, prostate, renal cell,
CC cervical and ovarian cancers, lung cancer (SCLC and NSCLC), including
CC cancer-associated cachexia, fatigue, solid tumours (e.g., osteosarcoma,
CC sarcoma), carcinoma (e.g., adenocarcinoma (for example, breast cancer),
CC squamous cell carcinoma), haematologic disorders, anaemias (e.g., anaemia
CC of Chronic disease, aplastic anaemia, Fanconi's aplastic anaemia,
CC with ringed sideroblasts or with excess blasts), idiopathic thrombocyto-
CC myeloid metaplasia, osteoclast disorders that lead to bone loss such
CC as osteoporosis including refractory anaemia, periodontitis
CC resulting in tooth losesning or loss, prosthesis losesning after joint
CC as osteoporosis including post-menopausal osteoporosis, periodontitis
CC resulting in tooth losesning or loss, prosthesis losesning after joint
CC dementia including Creutzfald-Jacob disease, demyelinating neuropathy,
CC demitia in-Barre syndrome, vertebral disc disease, Gulf war syndrome,
CC myasthenia gravis, chronic neuronal degeneration, stroke including
CC cerebral ischaemic diseases. HPRI and HPR2 polypeptides are also useful
CC deficient mammary development and infertility. The present sequence
CC is human HPR1 variant protein
                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 treating cell proliferation conditions such as leukaemia and tumour metastasis, osteoporosis resulting from an excess of bone-resorbing cells. HPR sequences are also useful for treating medical conditions and diseases such as cell proliferation, metabolic and reproductive hormone related conditions. They are useful for treating various haematologic and oncologic disorders a general sequence of the order and conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human and murine hematopoietin receptor polypeptides HPR1 and HPR2, useful for treating cell proliferation, metabolic, and reproductive hormone related conditions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treating cell proliferation conditions e.g., pancytopaenia, leukopaenia, anaemia, thrombocytopaenia, neurodegenerative disorders and osteoporosis resulting from a lack of bone-forming cells. They are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-OCT-2000; 2000US-238706P.

                                                                            cc antirheumatic, antiarthritic and muscular activities. The zcytor17
cc proteins are useful for treating and diagnosing lymphoid, immune,
cc inflammatory, spleenic, blood or bone disorders. Agonists or
anti-zcytor17 antibodies are useful in stimulating cell-mediated
cc inmunity and for stimulating lymphocyte proliferation, such as in the
creatment of infections involving immunosuppression, including certain
cviral infections. They are also useful for inducting cytotoxicity and
cf or treating leukopenias. Antagonist of zcytor17 polypeptides are useful
cf or treating autoimmune diseases (e.g. rheumatoid arthritis and multiple
colleges), inflammatory diseases (e.g. Crohn's disease), cancer,
cp pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to
chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to
ABA93843 and ABB05730 to ABB05745 represent sequences used in the
cexemplification of the present invention.

                                                                                                                                                                                                                                                                                                 The present invention describes haematopoietic receptor NR10 splicing variants (I). (I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.3 protein from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NR10; splicing variant; haematopoietin receptor; immunomodulator; haemostatic; haematopoietic factor; immunological disease; haematopoietic cell regulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NR10 splicing variants of hematopoietin receptor proteins and encoded genes, applicable in searching hematopoietic factors and developing remedies for immunological and hematopoietic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Maeda M,
